

THE JOHNS HOPKINS CARES MOBILE SAFETY CENTER: A COLLABORATIVE CHILD SAFETY INITIATIVE

Did you know that more than 1,000 children in Baltimore are hospitalized each year as a result of an injury?

Background

On an average day in Baltimore, 3 children will suffer an injury serious enough to put them in the hospital¹. In an average year, 1 out of every 4 children in Baltimore – about 34,000 children – can be expected to see a doctor for an injury². That's the same as the number of people in Camden Yards for a typical Orioles game. In Baltimore, as in the rest of the country, injury is the leading cause of death for children¹.

Research conducted through the Center for Injury Research and Policy at the Johns Hopkins Bloomberg School of Public Health has shown that children in low-income families in Baltimore City have an injury rate that is *twice* the national average³. Many of the injuries, especially burns from house fires or hot water, poisonings, drownings, falls, and traffic-related injuries, are preventable. Hopkins injury researchers have also found that combining education with improved access to safety products in a pediatric health care setting helped parents reduce their families' injury risks.⁴ Building on that success, the mobile safety center will bring education and safety products to the wider community. Formative research, including advice from parents and other child caregivers, indicated that Baltimore City families want more accessible injury prevention information, products and services.

The Johns Hopkins CARES Mobile Safety Center

The Johns Hopkins Center for Injury Research and Policy and the Baltimore City Fire Department, which has a strong history of community outreach and education, in partnership with many other organizations have created the Johns Hopkins CARES Mobile Safety Center. This 40-foot trailer will bring life-saving information and low-cost safety products to families throughout Baltimore. Designed as a house-on-wheels, the mobile safety center will show the hidden injury risks lurking in every room in a typical home, and more importantly, how to prevent those injuries. CARES stands for Children ARE Safe, and that's the goal. ***The mission of the mobile safety center is to promote the safety of children and families by delivering fun, interactive education and affordable safety products to the community.***

The CARES mobile safety center contains a kitchen exhibit to highlight burn and poisoning risks, a bathroom display to focus on drowning, poisoning and fall hazards, stairs to demonstrate fall prevention, a car safety seat station, and a bedroom display. In the bedroom, visitors will experience what it's like when a fire breaks out -- an on-board smoke generator and a heating element that makes the door hot to the touch simulate what happens in a real house fire. Educators will teach visitors both how to prevent fires, and how to prevent injury during a fire, including how to maintain smoke alarms and plan escape routes. Injury prevention experts from Johns Hopkins and from the Baltimore City Fire Department will staff the center. Safety products, such as car seats, bike helmets, safety gates, and cabinet locks will be available for sale at below-retail costs.

The mobile safety center will begin operating in July 2004 and will be an ongoing service to Baltimore communities. The mobile safety center will visit pediatric clinics, local elementary schools, health fairs and community events.

Sponsors

The Johns Hopkins CARES Mobile Safety Center was made possible through the generous financial support from BP, our initial sponsor, the Federal Emergency Management Association, and two Baltimore foundations, Annie E. Casey Foundation and the Weinberg Foundation. In addition, members of the Partnership (listed below) donated their time and expertise. The Maryland Institute College of Art and the Maryland Science Center generously shared their creative expertise in developing graphics, logo, and exhibits. Mobile safety center staffing is supported by the Baltimore City Fire Department and a grant from the Centers for Disease Control and Prevention, National Center for Injury Prevention and Control.

Evaluation

The mobile safety center will be evaluated in partnership with the Baltimore City Fire Department and the Johns Hopkins Community Physicians, East Baltimore Medical Center. Data on utilization of the mobile safety center, visitor reactions, and changes in knowledge, beliefs and safety practices will be monitored over time. Funding for the evaluation is from the Centers for Disease Control and Prevention, National Center for Injury Prevention and Control.

The Johns Hopkins CARES Mobile Safety Center Partnership Members

Johns Hopkins Bloomberg School of Public Health Center for Injury Research and Policy

Andrea Gielen, ScD, ScM, CHES	Eileen McDonald, MS
Lara Trifiletti, PhD, MA	Shannon Frattaroli, PhD, MPH
Mary Glenshaw, OT/L, MPH	Dawona Young, BS

Baltimore City Fire Department Chief Theodore Saunders

Johns Hopkins Children's Safety Center Eileen McDonald, MS

Johns Hopkins Pediatric Trauma Service
Susan Ziegfeld, MSN, CPNP, CCRN Vinita Knight, MPH

Johns Hopkins Community Physicians
Jeanne McCauley, MD, MPH, FACP Ruth Ashman, MD

Injury Free Coalition for Kids Baltimore Ben Selassie, MSW, MPH, ACSW, LCSW

Maryland Science Center Manjit Goldberg

Maryland Institute College of Art
Bernard Canniffe Richard Lipscher Kara Plikaitis

To schedule a visit from the mobile safety center or for more information, please email hopkins.cares@baltimorecity.gov or call Project Director, Mary Glenshaw, 410-955-4121.
